Professional Summary

Full-Stack Software Engineering undergraduate with hands-on experience in building scalable web applications using React, Node.js (Express), and Spring Boot. Skilled in developing RESTful APIs, implementing JWT authentication, and designing databases with MongoDB and MySQL. Familiar with TypeScript, Tailwind CSS, Git, and Agile workflows, with growing interest in cloud technologies (AWS) and modern deployment practices. Passionate about building user-focused, high-performance applications.

Professional Experience

Freelance – Full-Stack Developer (E-Commerce Platform) Self-Employed

2025 November – Present

Galle, Sri Lanka

- Designed and developed RESTful APIs using Node.js and Express with JWT-based authentication and role-based authorization
- Implemented Cloudinary image uploading system for product management
- Integrated secure payment processing and order workflows
- Designed MongoDB schemas for inventory and order management
- Deployed full-stack application using Vercel
- Utilized async/await and Promises for efficient asynchronous operations

Student Committee Vice President IJSE Institute of Software Engineering

Dec 2025 - Present

Galle, Sri Lanka

- Led planning and execution of student-led and community initiatives, including organizing a disaster relief campaign for Cyclone Ditwah
- Coordinated volunteers, logistics, and stakeholder communication across teams
- Collaborated with teams and improved leadership, communication, and problem-solving skills

Key Projects

Flower Bouquet E-Commerce Platform (MERN Stack)

Node.js, Express, MongoDB, React, JWT, Cloudinary | 2025 November – Present

- Built frontend using React with component-based architecture

- Applied modern UI styling with Tailwind CSS
- Worked with REST APIs and asynchronous operations (async/await)
- Managed application state and improved user experience

Betting Platform – Spring Boot Backend

Spring Boot, JWT, MySQL, Jsoup | September 2025 – October 2025

- Developed secure RESTful APIs with JWT and OAuth2 authentication
- Designed normalized MySQL database schemas and integrated PayHere payment gateway
- Implemented email automation (SMTP) and data scraping using Jsoup

Patient Risk Analysis System (Python)

Python, Pandas, NumPy, Matplotlib, Seaborn | Jan 2026 – Feb 2026

- Conducted Exploratory Data Analysis (EDA) on 100k+ medical records to evaluate 30-day hospital readmission risks, successfully navigating severe class imbalance targets.
- Built an automated web-scraping pipeline to clean and format unstructured clinical codes into structured datasets for predictive analysis.
- Developed comprehensive data visualizations to present multicollinearity checks, operational inefficiencies, and medication risks to non-technical stakeholders.

Core Skills

Languages

JavaScript, TypeScript (Basic), Java, Python

Database & Cloud

MySQL , MongoDB , Firebase , Vercel ,

Authentication

JWT, Role-Based Access Control

Tools & Workflow

Git & GitHub , Postman , Agile/Scrum

Frontend & UI/UX

React.js , React Native , TypeScript , Tailwind CSS ,Native Wind ,Figma

Concepts

REST APIs, Async Programming (Promises, async/await), API Design, Agile/Scrum

Education

Undergraduate in Computer Science

IJSE Institute of Software Engineering

Feb 2024 - Present

Focused on software engineering fundamentals and practical product delivery.

Diploma in English Language & Literature

Aquinas College of Higher Studies

July 2023 - October 2023

English Literature , Grammer

DegreeGCE O/L & A/L (Physical Sciences)

St. Aloysius' College

May 2014 - January 2023

Completed Ordinary Level with 9 As & Advanced Level in Physical Science stream with B,C,S

Professional Certifications

GENESYS Hackathon

IJSE Institute of Software Engineering | 2024

Introduction to Python

DataCamp | Mar 2025
